SUCCESSFUL DRILLING OF GENTING'S EXPLORATION WELL (ANAMBAS-1X) IN WEST NATUNA, INDONESIA

The Board of Directors of Genting Berhad is pleased to announce that its subsidiary, Genting Oil & Gas Limited (“GOGL”) has successfully completed the drilling of Genting’s exploration well (Anambas-1X), in which both dry gas and gas condensate were discovered.

The well is located on the Anambas Prospect in the Anambas Block of West Natuna. The Anambas-1X well is situated in Indonesian waters, 160 kilometres north of Matak and 280 kilometres east of Kerteh, Malaysia. The Anambas Block is operated with a 100% interest by GOGL’s wholly-owned subsidiary, Sanyen Oil & Gas Pte Ltd (“SOGPL”) under a Production Sharing Contract with BPMIGAS. BPMIGAS is the Indonesian agency responsible for supervising upstream oil & gas activities.

The Anambas-1X well commenced drilling on 9 July 2006 and was tested at a gas flow of 15.6 mscfd (million cubic feet of gas per day) and at a condensate flow of 488 bcpd (barrels of condensate per day).

Further evaluation of the Anambas-1X results will be undertaken to determine the reserve size and development potential, and henceforth the commercial viability of this discovery.

Genting’s Oil & Gas division will shortly begin the drilling of two more exploratory wells, 90km to the north of Anambas-1X, in the oil-prone Northwest Natuna Block in Indonesia.

Yours faithfully

GENTING BERHAD

MR QUAH CHEK TIN
